

## SINGAPORE INTERNATIONAL WATER WEEK 2010 RIVER BASIN & DELTA MANAGEMENT WORKSHOP

### MR TAN NGUAN SEN

DIRECTOR, CATCHMENT AND WATERWAYS  
PUB

*Singapore*

Mr Tan Nguan Sen is the Director of Catchment and Waterways Department in PUB which manages all the reservoir catchments and rivers/waterways in Singapore. He has extensive experience in planning and designing both drainage and used water infrastructure as well as in the construction, operation and management of drainage and water reclamation facilities.

Prior to becoming the Director of Catchment and Waterways Department in 2006, he was also involved in formulating key policies for water related issues. His experience spans the whole water cycle, from stormwater collection, drainage planning and development, potable water treatment and used water collection, treatment and reuse. Over a period of 25 years, he served in various capacities in the key operational departments in PUB and the job scope ranged from policy development, planning and design work, project management and operations and maintenance.

Since 2005, PUB has embarked on many programmes to generate greater awareness by the community on the importance of valuing and enjoying our water, the implication of living in water catchment areas and the need to keep the catchments clean. One of these is the ABC Waters Programme which will transform our waterways and their vicinity into vibrant lifestyle attractions, and create a sense of collective stewardship of our water resources among Singaporeans. Mr Tan is the Director in charge for the launch and implementation of the ABC Waters Programme.
