

HOW A SYSTEMS APPROACH CAN HELP DELIVER SDG 6

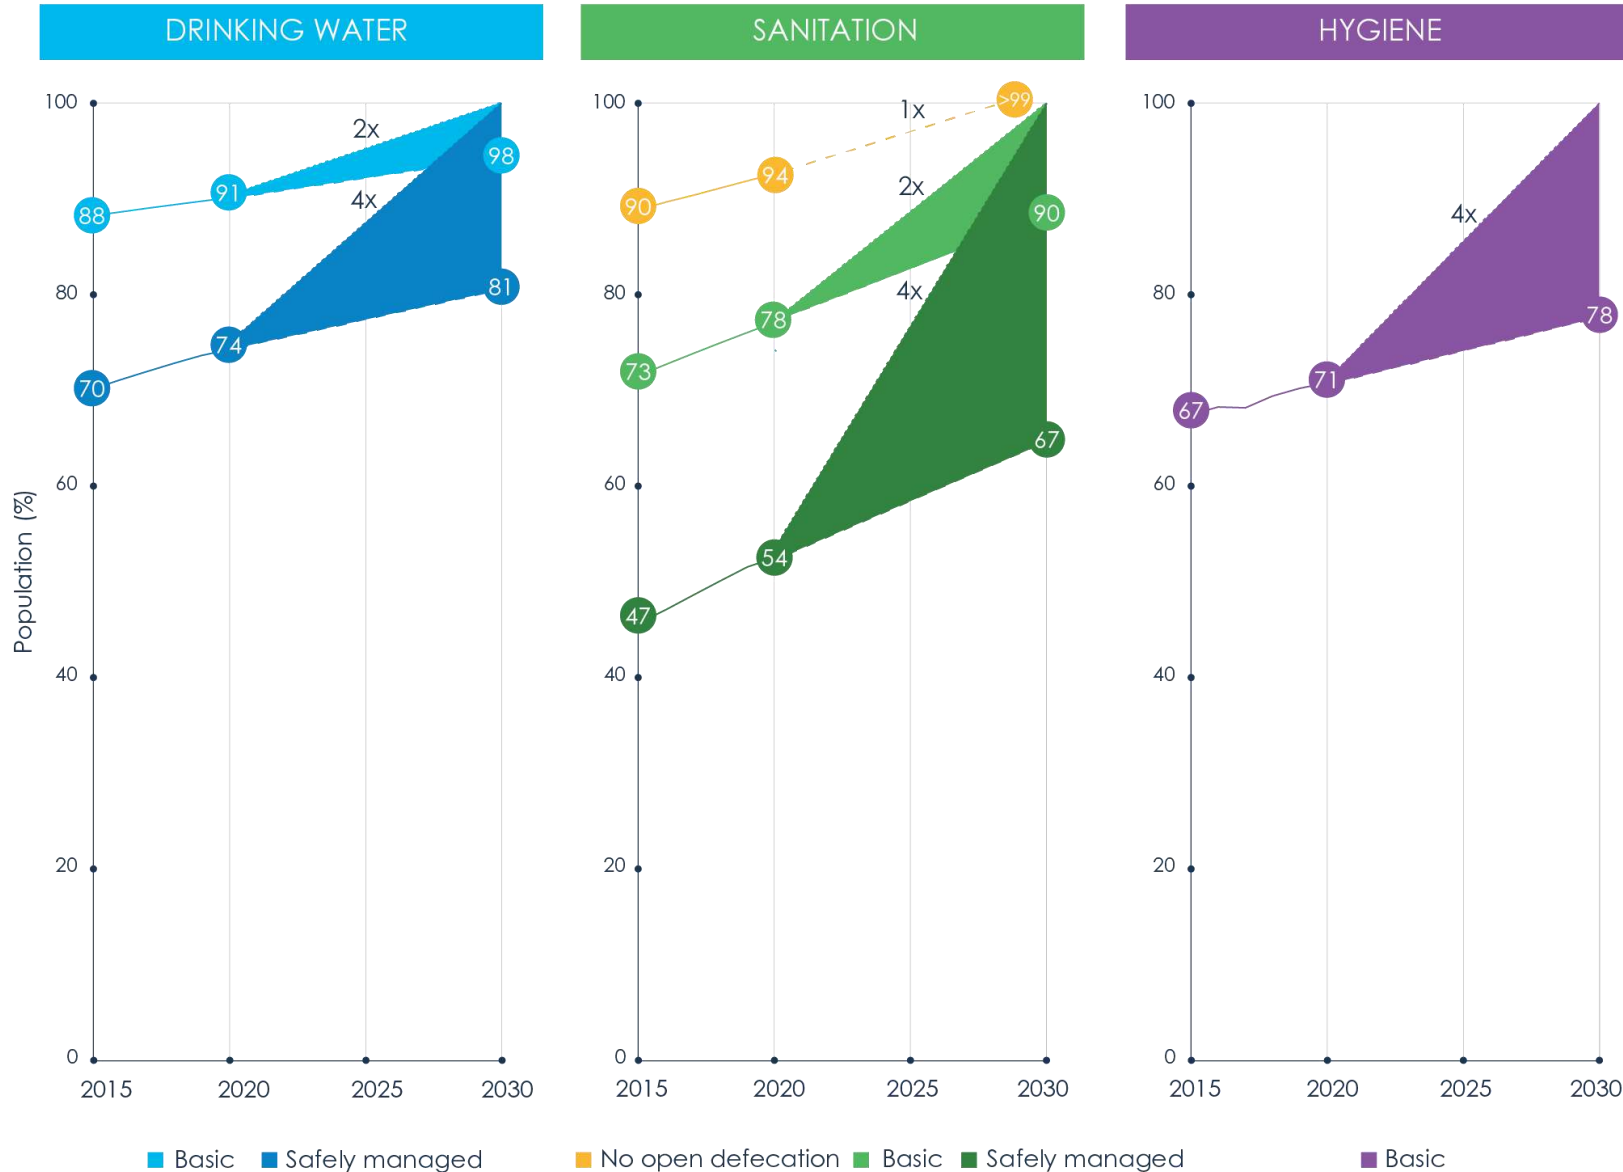

Singapore International Water Week 2022

PATRICK MORIARTY, IRC CEO

8 years
to 2030

“Achieving SDG WASH targets by 2030 will require a quadrupling of current rates of progress”

WHO/UNICEF JMP

The cause?

Fragmentation

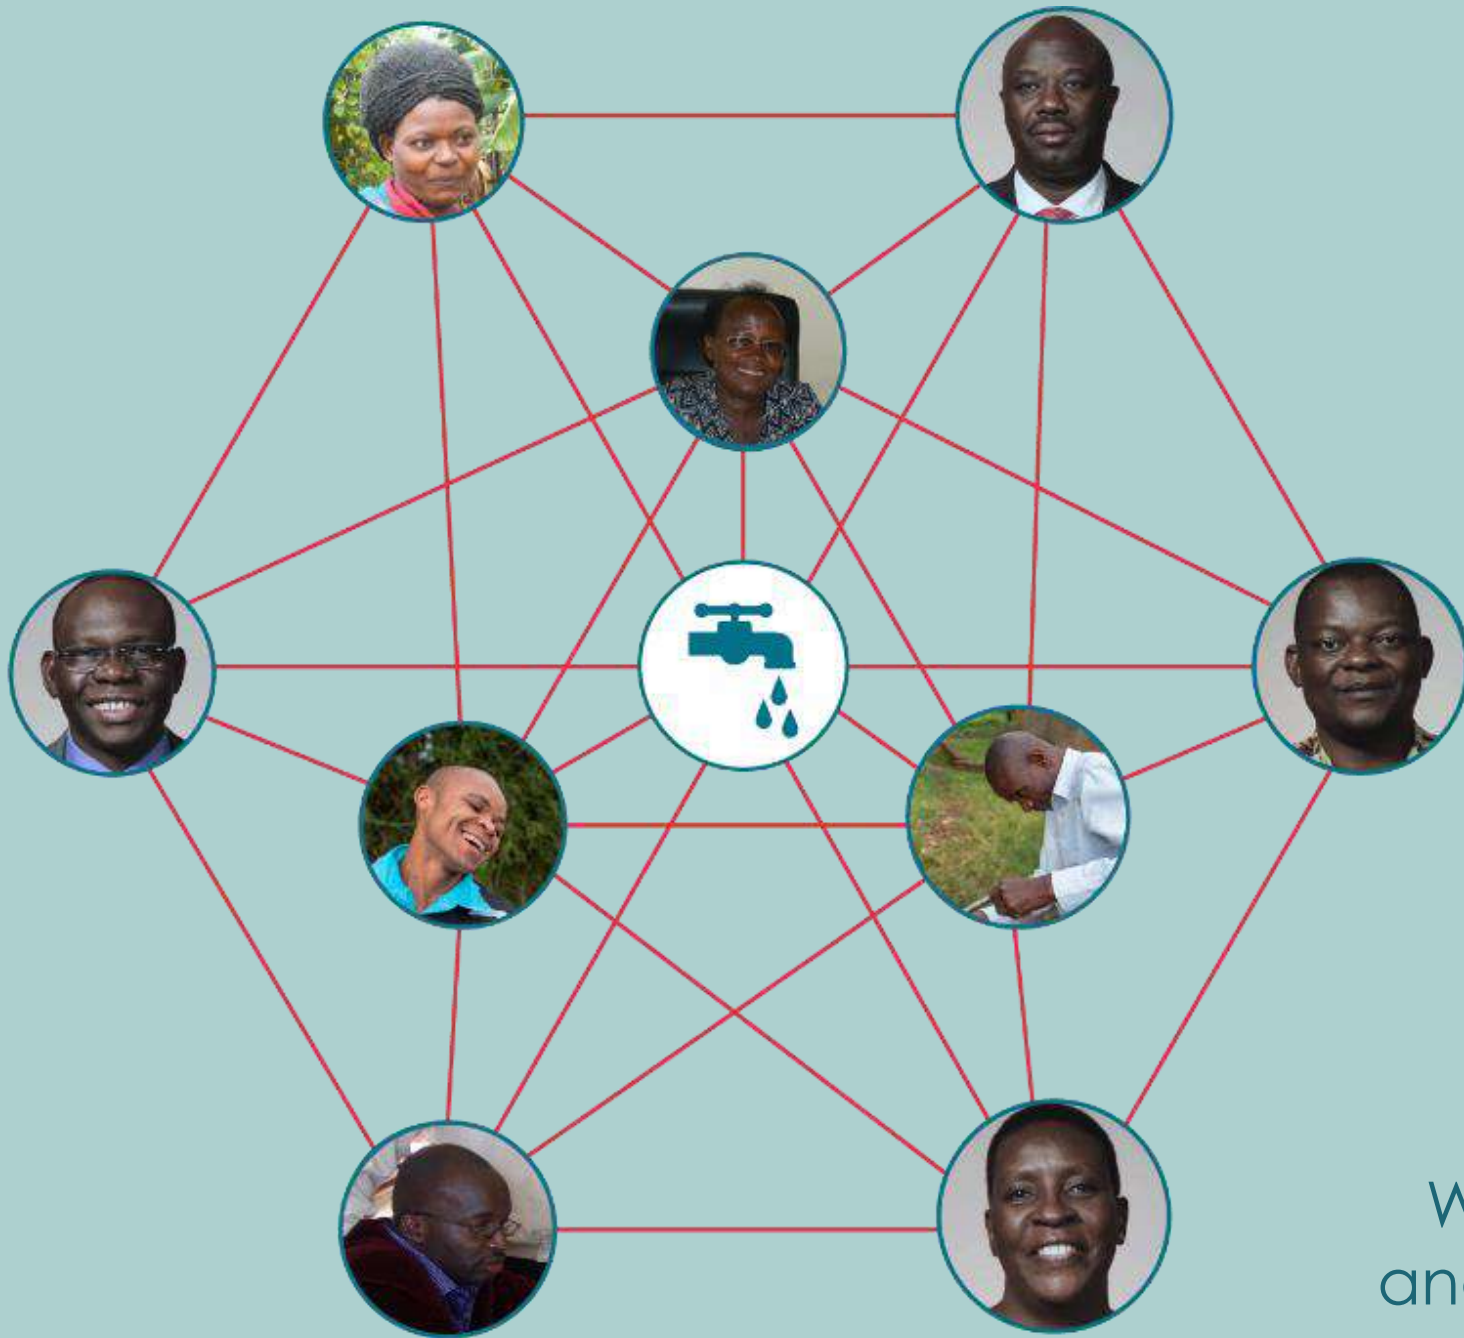

Systems Blindness

The solution?

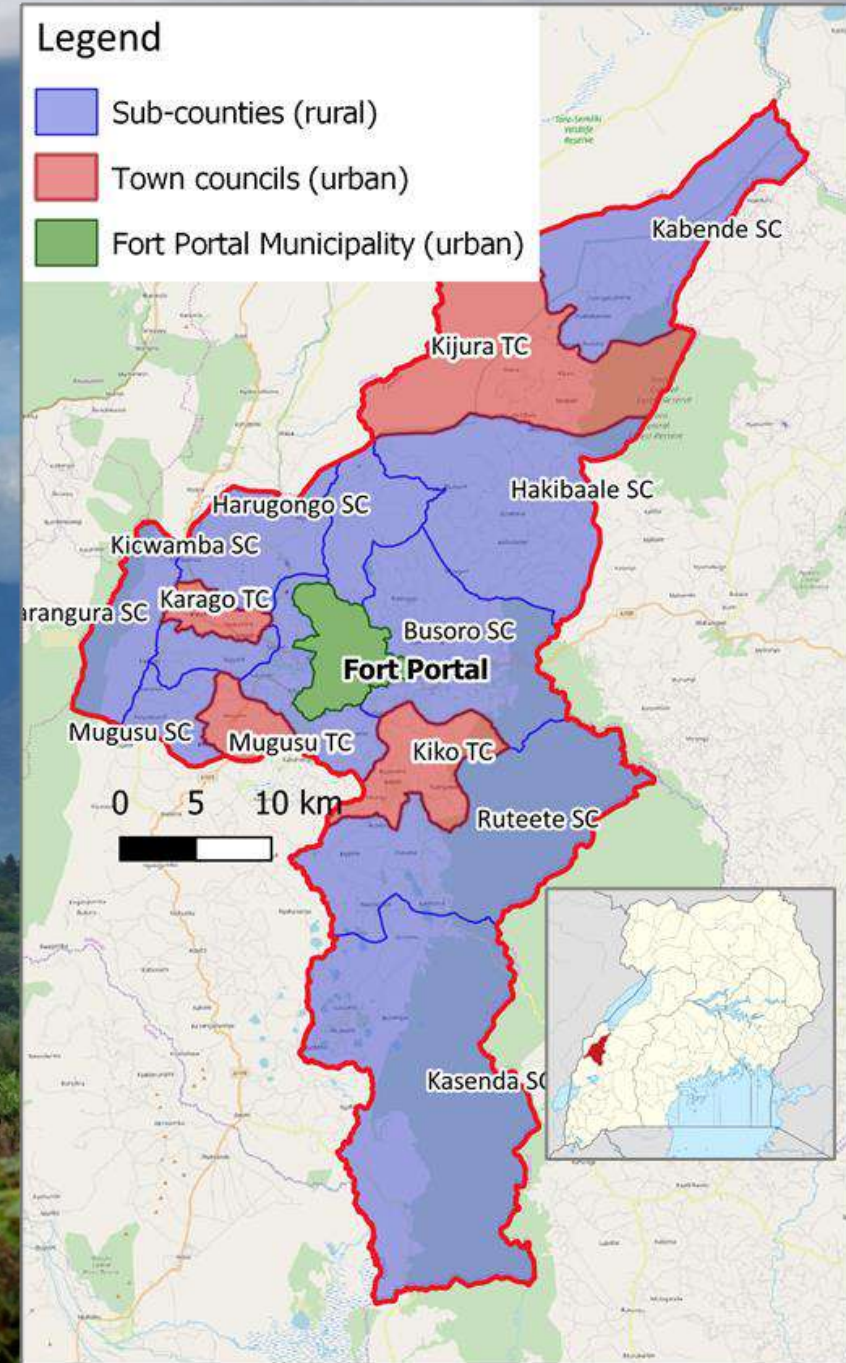

A photograph showing a man in a light-colored polo shirt leaning over a large, cylindrical water tap structure made of mud-brick. He is holding a mobile phone and looking at it. A young boy in a blue and white checkered shirt is standing next to him, looking down at something in his hands. In the background, several other children are gathered around the tap, some looking towards the camera. The setting is outdoors, with a tree and a building with a corrugated metal roof visible. The text 'A Systems Approach that centres on people – the users of water and sanitation services' is overlaid on the left side of the image.

**A Systems Approach
that centres on people**
– the users of water
and sanitation services

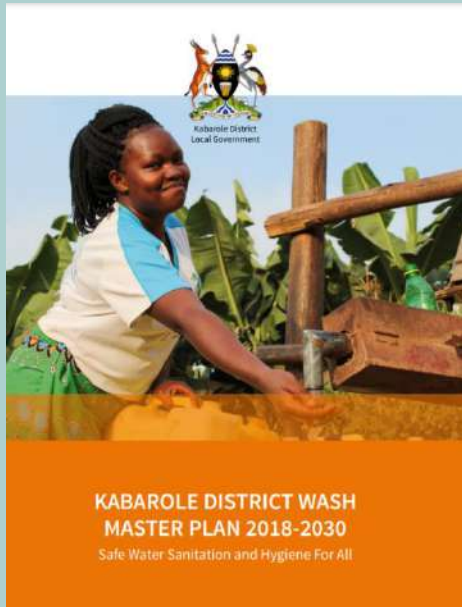

Water, sanitation
and hygiene system

The case of drinking water systems in Kabarole District, Uganda

Kabarole District WASH Task Team
